## **CODEGREEN CHOSEN FOR 15 NATIONAL PROJECTS ON EARTH DAY**

NEW YORK (Apr. 23, 2008) – CodeGreen experienced the unprecedented awareness of Earth Day on April 22<sup>nd</sup> by receiving fifteen new projects across the country in pursuit of LEED EB Certification, totaling over 3.7 million square feet.

The objective of Earth Day is to celebrate our global environment in appreciation of the Earth's million square miles of land, ocean, and infinite fresh air. So why is it that so many building owners and managers took part in the celebration and signed up their buildings with CodeGreen?

The difference with going green, unlike any other preceding trend, is that green started as a movement and quickly erupted into a lucrative market during 2007. It is due to this force which has made 2008's celebration particularly exciting for businesses and the environment alike, encouraging environmental stewardship and consideration to carbon footprint reduction. It's a movement that makes correcting excess energy consumption and technological waste, some of which has resulted from the Industrial Revolution and Dotcom Age, profitable.

CodeGreen creates sustainable solutions for commercial existing buildings and tenant spaces in compliance with the LEED Green Building Rating System™. Currently greening over 60 million square feet, CodeGreen helps building owners, managers, and tenants realize the financial and environmental benefits associated with improving the performance of a building or space. As part of these projects, CodeGreen will be helping clients such as SL Green, Jones Lang LaSalle and Monday Properties achieve sustainable and high performing results for their commercial properties.
